STM detours

TripModifications built from the detours the STM publishes on its own website

The line pages on stm.info mark every stop a detour skips and every stop it serves instead, and publish the road the vehicle leaves along with the road it takes. This feed is those flags, read against the trips running on the dates it covers, with no distance measured to decide what is served. Each page below draws one detour: the scheduled route in grey, the road the detour takes in teal, and the stops as the website marks them.

Service dates 20260921 to 20261004, 14 days · feed timestamp 2026-09-21 10:30 America/Montreal
407 line directions read from stm.info, 175 of them detoured, in 583 requests
209 entities · 283 modifications · 88 stops defined · 253 drawn below

The website says nothing about how long a detour lasts, so every date the feed covers carries the same detours: one lifted tomorrow is still written for the rest of the week. A detour whose replacement stops the website does not list is written without them; web/report.md names those.

Detours
